Acknowledgements	i
Abstract	ii
Kurzfassung	iv
Content	vi
List of Abbreviations	x
1 Introduction	1
1.1 Background and Motivation	1
1.2 Objectives and Contribution of the Thesis	3
1.3 Outline of the Work.....	4
2 Energy Management System of Microgrids	6
2.1 Introduction.....	6
2.1.1 Traditional Concept of Energy Systems.....	6
2.1.2 Drivers of Distributed Generation Development.....	6
2.2 Microgrid Concept	7
2.3 Microgrid Benefits.....	9
2.4 Ancillary Services in / from the Microgrids	10
2.5 Challenges and Barriers of Microgrids	11
2.6 Market Models for Microgrids	11
2.6.1 Microgrids Internal Market Models.....	12
2.6.2 Microgrids External Market.....	14
2.7 Energy Management System Framework.....	17
3 Models and Operation Policies in Microgrid's EMS	18
3.1 Component Models and Assumptions in EMS	18
3.1.1 Semi-Controllable Intermittent RES	18
3.1.2 Distributed Dispatchable Generators (DDG).....	21
3.1.3 Energy Storage System.....	28
3.2 Microgrid Operation Policies.....	31
3.2.1 Cost-Effective Operation (MOP 1).....	32
3.2.2 Grid Supporting Mode (MOP 2).....	32
3.2.3 Maximum Islanding Degree (MOP 3).....	33
3.2.4 Eco-Friendly Operation (MOP 4)	33
3.2.5 Multifunctional Policy (MOP 5).....	34

3.2.6	Reference Mode (REF)	34
4	Optimization of the Microgrids' UC and ED with Genetic Algorithm	35
4.1	Background and Basics	36
4.2	Main Features of the GA Related to the Work	37
4.3	Binary Coding vs. Real Encoding	38
4.4	Genetic Algorithm Process for UC & ED	39
4.5	Component Models and Inputs	41
4.6	Data Transformation and Encoding in p.u. Values	41
4.7	Reference Analysis Case	43
4.8	First Population Initialization	43
4.8.1	Random Initialization	44
4.8.2	Initialization Based on Priority List Method	44
4.8.3	Evaluation of Different Initializations Methods	46
4.9	Ranking of the Individuals	47
4.10	Selection of the Best Solutions	48
4.10.1	Tournament Selection	48
4.10.2	Elitism Selection	48
4.10.3	The Influence of Elitism Selection on the Optimization Results	49
4.11	Crossover Methods	49
4.11.1	Single Point Crossover (SPX)	50
4.11.2	Two Point Crossover (TPX) and Multi Point Crossover (MPX)	50
4.11.3	Simulated Binary Crossover (SBX)	50
4.11.4	Dynamic-Type Crossover (DTX)	52
4.11.5	Comparison of Different Crossover Methods	52
4.12	Mutation Process	53
4.12.1	Random Mutation Method (RM)	53
4.12.2	Semi-Probabilistic Mutation Method (SPM)	54
4.12.3	Adoptive Semi Probabilistic Mutation (ASPM)	56
4.12.4	Performance of Different Mutation Methods	56
4.13	Network Analysis Types	57
4.14	Constraints Handling and Penalty Function	58
4.14.1	Penalty Function	58
4.14.2	Influence of Different Penalty Assignment Methods on Convergence and Searching	60
4.15	Niching Method and Similarity Function	61
4.16	Fitness Function Assignment	63
4.17	Optimal Selection / Setting of GA Modules and Operators	64
4.18	Stop Criteria	65

4.19	Smart (Selective) Network Consideration	66
4.20	Summary of the Chapter.....	68
5	MILP-Based Optimizer for Microgrid EMS	71
5.1	Features and Utilization of MILP.....	71
5.2	Structure of the Optimization Modules.....	72
5.3	Definition of Linear Optimizer Core.....	73
5.3.1	Formulation of the Problem for MILP.....	73
5.3.2	MILP Solver and Related Techniques	76
5.4	Power Flow Optimization in Network Calculation Tool.....	76
5.4.1	Initial Power Flow Calculation Module (PFC).....	79
5.4.2	Voltage Set Point Optimization (VSO) and Q-Redispatching.....	79
5.4.3	P - Redispatching Module (PR).....	81
5.4.4	Unit Recommitment (URC).....	84
5.4.5	RES Curtailment (RESC) by Overvoltages.....	84
5.4.6	Current Correction Module for Overloadings	85
5.5	Summary of the Chapter.....	85
6	Analysis of EMS Performance for a Test Microgrid	87
6.1	Introduction.....	87
6.2	Description of Analysis Process.....	87
6.3	Test Microgrid for EMS Case Studies	88
6.3.1	Operation Cost curve of Dispatchable Generators.....	89
6.3.2	Exchange Energy Price of the Main Grid.....	90
6.3.3	Setting of Algorithms	91
6.4	Microgrid Operation in Reference Case Study.....	91
6.5	Sensitivity Analysis of BSS Aging in MOP1	93
6.6	Consideration of Network Constraints under MOP2.....	96
6.6.1	Analysis of GA Performance with Voltage and Current Constraints.....	96
6.6.2	Evaluation of MILP Modules with Network Constraint Violations	99
6.7	Microgrid Operation in Different Islanding Degrees (MOP3).....	103
6.7.1	Congestion Management of Microgrid for Upper Grid.....	103
6.7.2	Microgrid Operation under Islanded Mode.....	104
6.7.3	Microgrid with Scheduled / Fixed Exchange Power with Macro-Grid	105
6.7.4	Sensitivity Analysis of Exchange Power to Energy Price	106
6.7.5	Sensitivity Analysis of DDG Activation to Uniform Energy Pricing.....	108
6.8	Reduction of Greenhouse Gases Production under MOP4.....	110
6.9	Performance of GA in Highly Constrained Multi-Objective Problem of MOP5.....	113
6.10	Algorithm Performance and Speed in Smart PFC Mode.....	116
6.11	Conclusion of the Case Studies.....	118

7	Summary and Outlook	121
7.1	Summary.....	121
7.2	Outlook.....	125
8	Appendix.....	127
8.1	Diesel Generator Data Sheet of Cummins DG C90 D5.....	127
8.2	Macro / Micro-Cycles and BSS Life Loss Calculation	128
8.3	The GA Setting and Microgrid Inputs for Case Study of Chapter 4	129
8.4	Performed Analysis, GA Setting and Microgrid Inputs and Policies in Chapter 6	131
8.5	Examples of Defined SPM Mutation Process	134
8.6	Extra Results for Considering Network Constraints in EMS (Related to Chapter 6.6)	136
8.6.1	Small PV-Farm Power Curtailment in Case of Overloadings	136
8.6.2	Peak Shaving Performance of BSS in Case of Overloadings	137
8.7	Categorization and Comparison of the Optimization Methods	138
8.7.1	Introduction	138
8.7.2	Evolutionary Algorithms.....	140
8.7.3	Mathematical Methods	143
8.7.4	Artificial Intelligence Techniques	145
8.7.5	Conclusion and Selection of the Methods.....	146
8.8	Parametrization of the GA	148
8.9	Summary of Advantages and Drawbacks of the Developed MILP-Based Optimization Method in Chapter 5	150
8.10	Author's Publications	152
8.11	Supervised Bachelor and Master Theses	153
8.12	Bibliography	156
